

Public Sidewalk Ponding / Icing

COMMUNITY DEVELOPMENT DEPARTMENT & PUBLIC WORKS DEPARTMENT

Prepared By: Scott Drabicki, Village Engineer

Revision Date: May 17, 2016

Purpose

The Village will remediate ponding areas if they continue to hold water 48 hours after a liquid precipitation rain event and continual above freezing temperatures.

Scope

This procedure is intended to remediate ponding on public sidewalks.

Responsibilities

The Public Works Department is responsible for inspecting public sidewalks that are identified as experiencing ponding. Inspection should be performed by the Street Division of the Public Works Department.

Procedure

During inspection the Public Works Department shall evaluate the date of the most recent rainfall, the presence of ponding, and the specifics of the concern. Remediation may consist of hydraulically lifting the sidewalk to restore positive drainage, complete removal and replacement of sidewalk, re-grading around the sidewalk, or any other method that will achieve resolution of the ponding concern.
